

Introduction to S3

The screenshot shows the AWS Management Console search results for 's3'. The search bar at the top contains 's3'. The results are categorized into 'Services' and 'Features'.

Services (7 results shown):

- S3: Scalable Storage in the Cloud
- S3 Glacier: Archive Storage in the Cloud
- Athena: Query Data in S3 using SQL
- AWS Snow Family: Large Scale Data Transport

Features (10 results shown):

- Amazon S3 File Gateway: Storage Gateway feature

Below the search results, there is a sidebar with links to 'AWS Marketplace', 'AWS Documentation', 'AWS Support', and 'AWS News & Events'. A banner on the right side of the page promotes AWS resources and certification.

Page details: Sep 6 4:10 PM | us-west-2.console.aws.amazon.com/console/home?region=us-west-2# | Private | user-2 @ 8668-8013-6039 | Oregon | Support | https://s3.console.aws.amazon.com/s3/home?region=us-west-2 | © 2008 - 2021, Amazon Web Services, Inc. or its affiliates. The screenshot shows the S3 Management Console. The left sidebar includes 'Buckets', 'Storage Lens', 'Feature spotlight', and 'AWS Marketplace for S3'. The main area displays the 'Account snapshot' with metrics like Total storage (84.5 KB), Object count (3), and Avg. object size (28.1 KB). It also shows a 'Buckets' list with three buckets: 'ql-cf-templates-1630923630-ac8905e7e6fb10b0-us-west-2', 'qls-53497727-d8f99c39e802dfe1-s3bucket-q66voq91g0ct', and 'qltrail-lab-3667-1630923637'. Each bucket row includes columns for Name, AWS Region, Access, and Creation date.

Page details: Sep 6 4:15 PM | s3.console.aws.amazon.com/s3/home?region=us-west-2# | Private | user-1 @ 8668-8013-6039 | Global | Support | https://s3.console.aws.amazon.com/s3/home?region=us-west-2 | © 2008 - 2021, Amazon Web Services, Inc. or its affiliates. The screenshot shows the AWS S3 Management Console. On the left, a sidebar titled "Amazon S3" lists various options like Buckets, Storage Lens, and Marketplace. The main area displays an "Account snapshot" with a table showing two buckets: "ql-cf-templates-1630931283-bc6692aafc85464f-us-west-2" in US West (Oregon) and "qltralab-2543-1630931292" in US East (N. Virginia). Both buckets have "Objects can be public" access and were created on September 6, 2021.

Creating S3 bucket

The screenshot shows the "Create bucket" wizard. In the "General configuration" step, a bucket named "myawsbucket" is being created in the "US West (Oregon) us-west-2" region. The "Block Public Access settings for this bucket" section is expanded, showing that public access is currently granted to the bucket and its objects through access control lists (ACLs), bucket policies, access point policies, or all. A note states that to ensure public access is blocked, "Block all public access" must be turned on. The "Choose bucket" button is visible.

The screenshot shows the AWS S3 Management Console interface. A green banner at the top indicates that a new bucket named 'reportbucket105' has been successfully created. Below the banner, there's a promotional message about AWS Transfer Family. The main area displays an 'Account snapshot' with storage statistics and a link to enable advanced metrics. A 'Buckets' section shows three existing buckets, with a prominent orange 'Create bucket' button. On the left, a sidebar lists various S3 features like Buckets, Storage Lens, and Feature spotlight. At the bottom, standard AWS navigation links for feedback, language selection, and legal notices are visible.

The screenshot shows the 'reportbucket105' bucket details page within the AWS S3 Management Console. The top navigation bar shows the bucket name. The main content area is titled 'reportbucket105' with a 'Info' tab. Below the title, there's a summary section for 'Objects' stating '(0)' and providing instructions for managing objects. It includes buttons for creating a folder or uploading files. A search bar for 'Find objects by prefix' is also present. At the bottom, there's a table header for listing objects and a note that no objects are currently present. Standard AWS navigation links are at the bottom.

Bucket and objects not public

Block public access (bucket settings)

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to all your S3 buckets and objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to your buckets or objects within, you can customize the individual settings below to suit your specific storage use cases. [Learn more](#)

Edit Block public access (bucket settings) Info

Block public access (bucket settings)

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to all your S3 buckets and objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to your buckets or objects within, you can customize the individual settings below to suit your specific storage use cases. [Learn more](#)

Block all public access
Turning this setting on is the same as turning on all four settings below. Each of the following settings are independent of one another.

- Block public access to buckets and objects granted through new access control lists (ACLs)**
S3 will block public access permissions applied to newly added buckets or objects, and prevent the creation of new public access ACLs for existing buckets and objects. This setting doesn't change any existing permissions that allow public access to S3 resources using ACLs.
- Block public access to buckets and objects granted through any access control lists (ACLs)**
S3 will ignore all ACLs that grant public access to buckets and objects.
- Block public access to buckets and objects granted through new public bucket or access point policies**
S3 will block new bucket and access point policies that grant public access to buckets and objects. This setting doesn't change any existing policies that allow public access to S3 resources.
- Block public and cross-account access to buckets and objects through any public bucket or access point policies**
S3 will ignore public and cross-account access for buckets or access points with policies that grant public access to buckets and objects.

Block public access (bucket settings)

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to all your S3 buckets and objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to your buckets or objects within, you can customize the individual settings below to suit your specific storage use cases. [Learn more](#)

Block all public access
Turning this setting on is the same as turning on Block public access to buckets and objects.

Block public access to buckets and objects
S3 will block public access permissions applied to ACLs for existing buckets and objects. This uses ACLs.

Block public access to buckets and objects
S3 will ignore all ACLs that grant public access.

Block public access to buckets and objects
S3 will block new bucket and access point policies that allow public access to objects.

Block public and cross-account access policies
S3 will ignore public and cross-account access for buckets or access points with policies that grant public access to buckets and objects.

Edit Block public access (bucket settings)

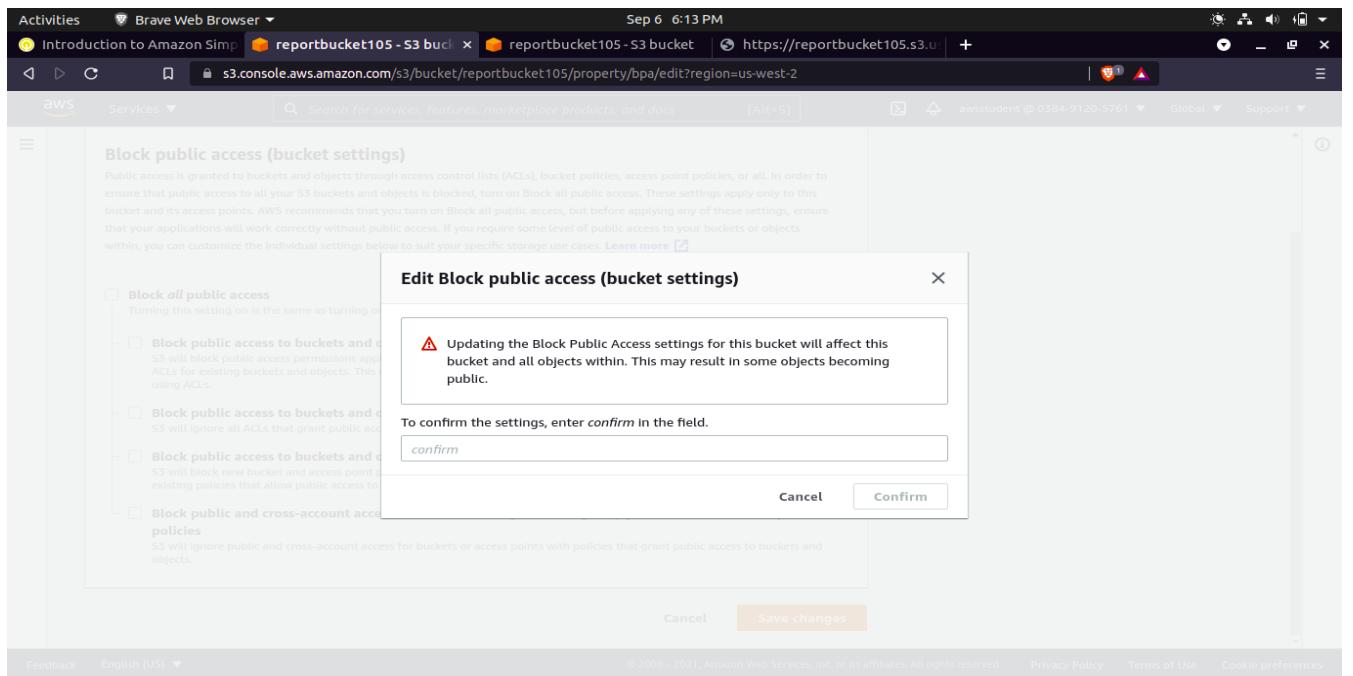

Updating the Block Public Access settings for this bucket will affect this bucket and all objects within. This may result in some objects becoming public.

To confirm the settings, enter **confirm** in the field.

Cancel **Confirm**

Connect to instance Info

Connect to your instance i-066e037b9c6bc9a08 (Bastion Host) using any of these options

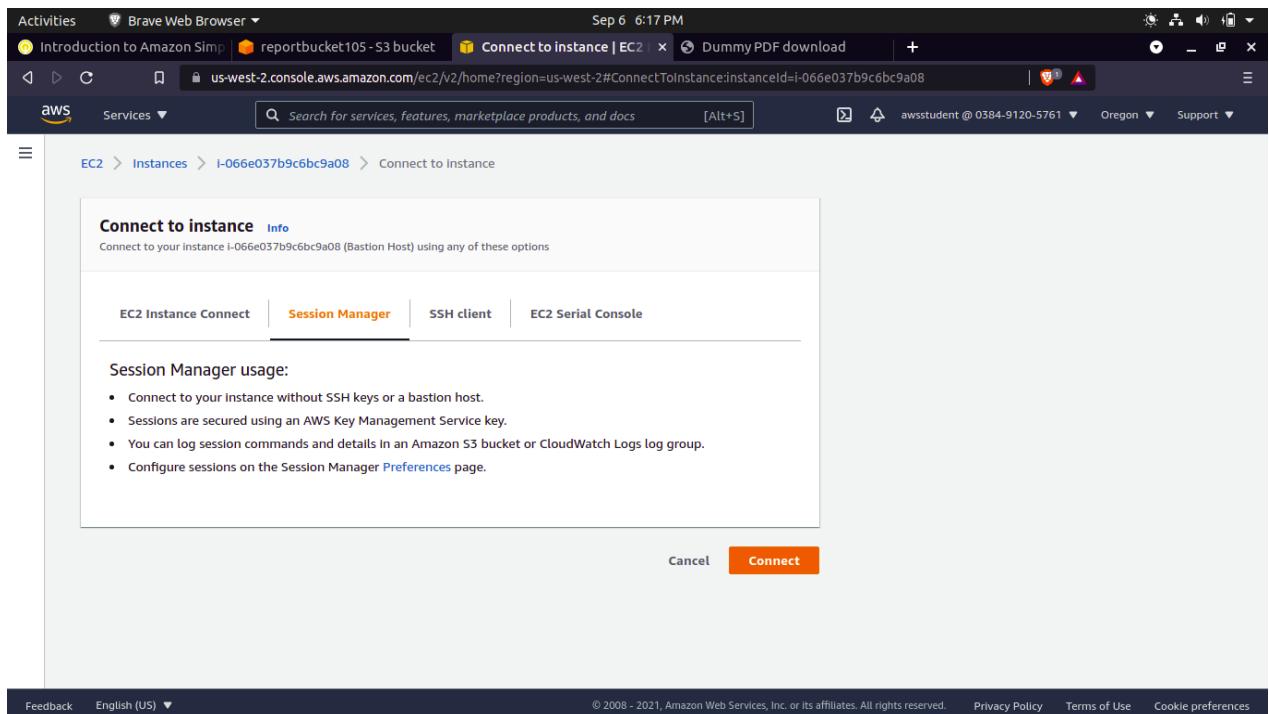

EC2 Instance Connect Session Manager SSH client EC2 Serial Console

Session Manager usage:

- Connect to your instance without SSH keys or a bastion host.
- Sessions are secured using an AWS Key Management Service key.
- You can log session commands and details in an Amazon S3 bucket or CloudWatch Logs log group.
- Configure sessions on the Session Manager Preferences page.

The screenshot shows the AWS S3 console interface. The top navigation bar includes tabs for 'Activities' (with a 'Brave Web Browser' icon), 'Sep 6 6:26 PM', and several open tabs related to Amazon Simple Storage Service (S3). The main search bar at the top right contains the URL 's3.console.aws.amazon.com/s3/buckets/reportbucket105?region=us-west-2&tab=objects'. Below the search bar, there's a 'Search for services, features, marketplace products, and docs' field and a keyboard shortcut '[Alt+S]'. The left sidebar, titled 'Amazon S3', has sections for 'Buckets', 'Access Points', 'Object Lambda Access Points', 'Multi-Region Access Points', 'Batch Operations', 'Access analyzer for S3', and 'Block Public Access settings for this account'. It also includes a 'Storage Lens' section with 'Dashboards' and 'AWS Organizations settings'. A 'Feature spotlight' section is shown with a blue circular badge containing the number '3'. The main content area is titled 'reportbucket105' and shows the 'Info' tab. Below this, the 'Objects' tab is selected, indicated by an orange background. The object list shows two items: 'dummy-pdf_2.pdf' (Type: pdf, Last modified: September 6, 2021, Size: 7.3 KB, Storage class: Standard) and 'sample-file.txt' (Type: txt, Last modified: September 6, 2021, Size: 113.0 B, Storage class: Standard). Action buttons for each object include 'Copy S3 URI', 'Copy URL', 'Download', 'Open', 'Delete', and an 'Actions' dropdown menu. A 'Create folder' button is also present. A search bar at the bottom allows filtering objects by prefix. The bottom of the page includes standard footer links for 'Feedback', 'English (US)', 'Privacy Policy', 'Terms of Use', and 'Cookie preferences'.

The screenshot shows the AWS S3 Bucket Permissions page for the bucket 'reportbucket105'. The left sidebar includes options like Buckets, Storage Lens, and Feature spotlight. The main content area displays three sections under 'Block public access to buckets and objects granted through any access control lists (ACLs)':

- Block public access to buckets and objects granted through **new** public bucket or access point policies **Off**
- Block public and cross-account access to buckets and objects through **any** public bucket or access point policies **Off**

Below this, the 'Bucket policy' section indicates 'No policy to display.' with a 'Copy' button.

Overriding policies

The screenshot shows the 'Edit bucket policy' page for the 'reportbucket105' bucket. The left sidebar is identical to the previous screenshot. The main content area has tabs for 'Policy examples' and 'Policy generator' (which is selected). The 'Bucket ARN' field contains 'arn:aws:s3:::reportbucket105'. The 'Policy' section is currently empty, showing a single character '1'.

Sep 6 6:29 PM

The AWS Policy Generator is a tool that enables you to create policies that control access to Amazon Web Services (AWS) products and resources. For more information about creating policies, see [key concepts in Using AWS Identity and Access Management](#). Here are [sample policies](#).

Step 1: Select Policy Type

A Policy is a container for permissions. The different types of policies you can create are an [IAM Policy](#), an [S3 Bucket Policy](#), an [SNS Topic Policy](#), a [VPC Endpoint Policy](#), and an [SQS Queue Policy](#).

Select Type of Policy

Step 2: Add Statement(s)

A statement is the formal description of a single permission. See a [description of elements](#) that you can use in statements.

Effect Allow Deny

Principal

AWS Service All Services (*)

Actions All Actions (*)

Amazon Resource Name (ARN)

ARN should follow the following format: arn:aws:s3:::\${BucketName}/\${Keyname}.
Use a comma to separate multiple values.

Add Conditions (Optional)

Resource field is not valid. You must enter a valid ARN.

Step 3: Generate Policy

Sep 6 6:30 PM

The AWS Policy Generator is a tool that enables you to create policies that control access to Amazon Web Services (AWS) products and resources. For more information about creating policies, see [key concepts in Using AWS Identity and Access Management](#). Here are [sample policies](#).

Step 1: Select Policy Type

A Policy is a container for permissions. The different types of policies you can create are an [IAM Policy](#), an [S3 Bucket Policy](#), an [SNS Topic Policy](#), a [VPC Endpoint Policy](#), and an [SQS Queue Policy](#).

Select Type of Policy

Step 2: Add Statement(s)

A statement is the formal description of a single permission. See a [description of elements](#) that you can use in statements.

Effect Allow Deny

Principal

AWS Service All Services (*)

Actions All Actions (*)

Amazon Resource Name (ARN)

ARN should follow the following format: arn:aws:s3:::\${BucketName}/\${Keyname}.
Use a comma to separate multiple values.

Add Conditions (Optional)

You added the following statements. Click the button below to Generate a policy.

Principal(s)	Effect	Action	Resource	Conditions
arn:aws:iam::038491205761:role/EC2InstanceProfileRole	Allow	• s3:GetObject • s3:PutObject	arn:aws:s3:::reportbucket105/*	None

Step 3: Generate Policy

A policy is a document (written in the [Access Policy Language](#)) that acts as a container for one or more statements.

Using policies to access file publicaly

Introduction to Amazon AWS Policy Generator Connect to Instance AWS Systems Manager https://reportbucket105/

awspolicygen.s3.amazonaws.com/policygen.html

AWS Policy Generator

The AWS Policy Generator is a tool that enables you to create policies that control access to Amazon Web Services (AWS) products and resources. For more information about creating policies, see [key concepts in Using AWS Identity and Access Management](#). Here are sample policies.

Step 1: Select Policy Type

A Policy is a container for permissions. The different types of policies you can create are an IAM Policy, an S3 Bucket Policy, an SNS Topic Policy, a VPC Endpoint Policy, and an SQS Queue Policy.

Select Type of Policy S3 Bucket Policy

Step 2: Add Statements(s)

A statement is the formal description of a single permission. See [a description of elements](#) that you can use in statements.

Effect Allow Deny

Principal

AWS Service Amazon S3 All Services (*)

Actions Select Actions All Actions (*)

Amazon Resource Name (ARN)

Policy JSON Document

Click below to edit. To save the policy, copy the text below to a text editor. Changes made below will not be reflected in the policy generator tool.

```
{ "Version": "2012-10-17", "Statement": [ { "Sid": "StringId", "Effect": "Allow", "Action": "s3:GetObject", "Resource": "arn:aws:s3:::reportbucket105/*", "Condition": {} }, { "Sid": "StringId", "Effect": "Allow", "Action": "s3:PutObject", "Resource": "arn:aws:s3:::reportbucket105/*", "Condition": {} } ] }
```

You added the following statements. Click

Principal(s)	Effect	Action	Resource	Conditions
arn:aws:iam::038491205761:role/EC2InstanceProfileRole	Allow	s3:GetObject s3:PutObject	arn:aws:s3:::reportbucket105/*	None

Step 3: Generate Policy

A policy is a document (written in the [Access Policy Language](#)) that acts as a container for one or more statements.

Amazon S3 Services

Amazon S3 > reportbucket105 Edit bucket policy

Edit bucket policy

Bucket policy

The bucket policy, written in JSON, provides access to the objects stored in the bucket. Bucket policies don't apply to objects owned by other AWS services.

[Policy examples](#) [Policy generator](#)

Bucket ARN

arn:aws:s3:::reportbucket105

Policy

```
1 { "Effect": "Allow", "Principal": "arn:aws:iam::03849120576:", "Action": "s3:PutObject", "Resource": "arn:aws:s3:::reportbucket105/*", "Condition": {"StringEquals": {"aws:Requester": "arn:aws:s3:::reportbucket105"}, "StringNotEquals": {"aws:Requester": "arn:aws:lambda:038491205761:lambdaFunction1"}}, "Sid": "S3PutObject"}
```

Preview external access

Please and validate AWS Access Analyzer findings for external access to your resource. [Learn more](#)

Preview external access to your bucket with Access Analyzer

Access Analyzer analyzes your bucket policy together with existing bucket permissions to preview findings for external access to your bucket. You can preview findings for public and cross-account access to your bucket before you save your policy. Choose an analyzer and select preview to begin.

[Learn more about Access Analyzer](#)

No analyzers

To preview external access to your bucket, create an analyzer in your bucket's region

Amazon Web Services

AWS Policy Generator

The AWS Policy Generator is a tool that enables you to create policies that control access to **Amazon Web Services (AWS)** products and resources. For more information about creating policies, see [key concepts in Using AWS Identity and Access Management](#). Here are [sample policies](#).

Step 1: Select Policy Type

A Policy is a container for permissions. The different types of policies you can create are an [IAM Policy](#), an [S3 Bucket Policy](#), an [SNS Topic Policy](#), a [VPC Endpoint Policy](#), and an [SQS Queue Policy](#).

Select Type of Policy [S3 Bucket Policy](#)

Step 2: Add Statement(s)

A statement is the formal description of a single permission. See a [description of elements](#) that you can use in statements.

Effect Allow Deny

Principal arn:aws:iam::03849120576:

Use a comma to separate multiple values.

AWS Service Amazon S3 All Services (*)

Use multiple statements to add permissions for more than one service.

Actions -- Select Actions -- All Actions (*)

- AbortMultipartUpload
- BypassGovernanceRetention
- CreateAccessPoint me){\$KeyName}.

Amazon Resource Name (ARN)
